REFLECTION FILE:

1. What did you learn through creating your project? What went well and what did not go so well? Was anything unexpected?

> Throughout my project I learnt new python concepts like how to find the longitude and latitude of a location and how to compute the distance between two points. I had a couple of issues trying to replace text buttons with images and some loops that weren't working the way I wanted them to work.

2. How was the process of learning something "new" and building it into your project?

> The process was okay, it was almost like a research work, where'd I had to search things up and go through some tutorials in order to fully grasp the concept to be able to apply it.

3. Write a note to yourself that you will roe-read before starting your senior capstone. What do you want to remind your future self about handling a self-directed project, especially, one that will be larger and the more complex?

> START EARLY!!!! START EARLY! START EARLY! START EARLY! PLEASE JUST START EARLY! Also exercise patience and seek for help when needed if you can.
